

General information about AJ Energy & Bedding

The rape straw bedding comes in different variations. The products are Danish processed, heat treated, with minimal dust, bacteria-free and with many uses. Rape bedding is a natural product. The bedding is extremely absorbent, which means that the surface is always dry, and this results in a better environment in the stable. The bedding may be used for pigs, cows, chickens/hens, mink, sheep, horses and pets. It can be used almost anywhere and often with great results in terms of **time/quantity/economy** – compared to shavings or regular straw.

Today we manufacture 5 different products of approved and high quality ingredients. AJ-Strømel, AJ Kross Grov, AJ Kross Fin and AJ-Raps Dry are use protected.

AJ-Strømel is used in piglet creep areas. The product will remain, keeps the floor dry and is effective against diarrhea, umbilical hernia and joint inflammation. The product has a natural content of copper, zinc and iron. Highly absorbent which results in a better environment. Strew the area before farrowing with about 1.5 kg and strew more if needed.

AJ-Kross Grov used by poultry producers (open field, ecology, etc.). The product has many good qualities, which includes gentle on the pads and minimizes picking. It accommodates the natural behavior of "Sandy bathing" in chickens/hens.

AJ-Kross Grov is also used as bedding and rooting for pigs, sows and slaughter pigs. The product can be used from weaning. If the pig switches the manure area for the resting area, AJ-Kross Grov with its high absorbent ability is able to make the pig return to the right area. In case of outbreak of tail- and flank bite and turmoil, use about 100 grams per piglet 2 times daily for several days. Effective in environments with loose sows, as the product remains in the bed. Cleaner animals. Animal-friendly and effective as a base in relief pens. Upon transfer, about 250 grams per animal. Ongoing, as needed.

AJ Kross Grov is preferred by some horse owners, as they believe that the bottom is perfect from the start.

AJ Kross Fin is used as bedding in the cubicles for cows and calves. The product has a positive effect on infections, cell count and better udder health, because of its high absorbency and therefor dry resting areas. The product remains in the beds, which results in a low consumption. Estimated consumption about 110 kg per. cow each year. Suitable in deep litter, calving, calf- and relief boxes.

AJ-Raps Dry® is a new dry hygiene product, which combines the unique and amazing qualities from all of our rape straw bedding. AJ-Raps Dry® is composed of special selected raw materials with a high proportion of rape straw, and therefore we have a product that dries out and also functions as bedding. High absorption capacity and still homogeneous.

AJ-RapeStraw Pellets used as bedding in horse stalls. The product gives the horse a well-kept box, binds ammonia smell, less manure and thus reduces mucking of stalls. It has an extremely high absorbency. Positive effect on "thrush" and colic. Some horses use it as a resting area. When starting a box use a layer of 5 cm of rape straw pellets across the box. Ongoing about 1 time per week. Annual Consumption about 1.000 kg each box.

A DRY AND GREEN ENVIRONMENT DOES WELL FOR ANIMALS AND HUMANS
