

### General information about AJ Energy & Bedding

The rape straw bedding comes in different variations. The products are Danish processed, heat treated, with minimal dust, bacteria-free and with many uses. Rape bedding is a natural product. The bedding is extremely absorbent, which means that the surface is always dry, and this results in a better environment in the stable. The bedding may be used for pigs, cows, chickens/hens, mink, sheep, horses and pets. It can be used almost anywhere and often with great results in terms of **time/quantity/economy** – compared to shavings or regular straw.

### AJ-Rapestrawpellets for horses

The product is very appropriate to bedding in horseboxes, because the pellets are germ-free and with minimum content of dust, and therefore it has a positive effect on thrush and colic. Furthermore, it is much easier to muck out, because you have less material that must be moved and with it you have a smaller dunghill. The rapestrawpellets can absorb until, they are orange or totally dark brown.

**Application:** Apply of a new box, are you using 5 centimetres of AJ-rapestrawpellets in the whole box. The pellets will be extending around 2½ time it's normal size. If it tends to give off some dust in the beginning, possibly it is a good idea to give the bedding some water (*we recommend you give around 7-10 litre of water per box*). In your daily routine, you remove all horse droppings and wet spots. Normally you give new pellets once a week (*around 30-40 kg*), so you always have 10-12 cm of bedding in the box. Sometimes you give more/ or less of the bedding. It depends on the horse/ or pony. When the pellets are crushed, can you rake the box, so you always have a soft and welcoming box. **Annual consumption approx. 1.000 kg per box/horse and approx. 500 kg per box/pony.**

- Heat-treated.
- Pure natural product.
- Extreme suction capacity.
- Soft bouncy base. Some horses are using it as rest lair.
- Easy to handle.
- Absorbs from the bedding.
- Always a dry surface.
- Ties the ammoniac smell.
- Positive effect on "thrush".
- Positive effect on horses with colic.
- Better stable environment.
- Minimise flies.
- Does not stick to the concrete, easy to clean up/wash.
- Easy daily muck out.
- Minimal dunghill (*around 35 %*).
- Cheap to use.
- Quick to convert in the field.
- In pellets (*8 millimetre*).
