

## **AJ Energi & Strø - 100% rapeseed straw bedding**

Our rapeseed straw is a natural product which is processed in Denmark; it is heat-treated, contains minimal dust and is free of bacteria. The bedding is extremely absorbent, which means that the surface is always dry. It thus creates a better environment on the farm.

It can be used almost anywhere, often with considerable savings of time, quantity and cost by comparison with shavings or regular straw.

**AJ-Kross Mink** - ideal for use with pups. Use around one litre of the product when preparing the cage; this provides a dry and soft environment for the mink. It also fills up the gaps, resulting in a nesting cage with a solid floor. After spreading the AJ Kross Mink it is a good idea to add some coarse straw to the cage; the cage is then ready for use. The product is highly absorbent. If the animal has diarrhoea, some more of the product can be added to the cage to keep it nice and dry.

**AJ-Kross Mink** - is ideal for use on the whelping mesh. When the mesh gets a bit slippery, the product can be added through the top of the cage so that it lies on the whelping mesh. It is highly effective. Always have the product close at hand on the farm. The product ensures that the animals have clean paws and that their environment stays nice and clean. Early use of the product makes the cage and mesh easier to clean. A large number of farms have used this product from AJ Energi & Strø in recent years.

### **Consumption of AJ Kross Mink**

**1 kg = 3 litres of AJ Kross Mink**

**1 Big Bag / 800 kilos = 2.400 litres**

Using **1 litre** per nest cage means that one Big Bag of 800 kilos is enough for **2.400** nest cages.

Using **1.5 litres** per nest cage means that one Big Bag of 800 kilos is enough for **1.600** nest cages.

Using **2 litres** per nest cage means that one Big Bag of 800 kilos is enough for **1.200** nest cages.
